| Date          | 05-06-2026                                  |
| Team ID       |                                             |
| Project Name  | Emotion Detection & Learning Support Engine |
| Maximum Marks | 3 Marks                                     |

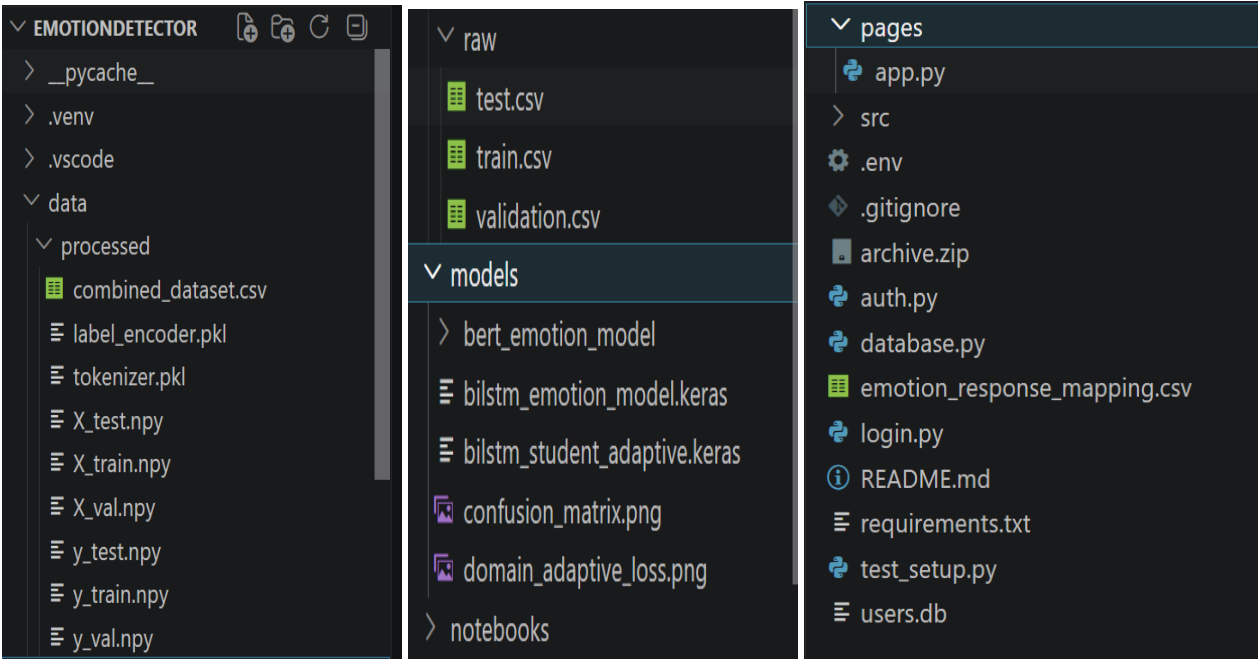

### Project Executable Files

#### Step 1: Submission Checklist

| S.No | Item to Submit                                                  | Submitted (Yes / No / NA)                          |
|------|-----------------------------------------------------------------|----------------------------------------------------|
| 1    | Complete source code (all files and folders)                    | Yes                                                |
| 2    | README / Setup Guide (instructions to run the project)          | Yes                                                |
| 3    | requirements.txt / package.json / dependency file               | Yes                                                |
| 4    | Database schema / seed files (if applicable)                    | NA ( <i>CSV files used instead of a database</i> ) |
| 5    | Environment configuration file (.env.example similar)           | Yes                                                |
| 6    | Deployed application URL (if hosted)                            | Not Deployed<br>(Runs Locally using Streamlit)     |
| 7    | APK / Executable binary (if applicable for mobile/desktop apps) | NA                                                 |
| 8    | Dockerfile / Containerization config (if applicable)            | NA (Not Used)                                      |
| 9    | Test files and test results                                     | Yes                                                |
| 10   | Demo video or walkthrough (if required)                         | Yes                                                |

## Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

## Step 3: Deployment / Access Details

| Field                       | Details                                                                                                                                                                             |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Hosted / Deployed URL       | Not Deployed (Runs Locally using Streamlit)                                                                                                                                         |
| Login Credentials (Demo)    | <a href="mailto:demo123@gmail.com">demo123@gmail.com</a> , 1234567                                                                                                                  |
| Platform / Hosting Provider | Google Cloud Run / Localhost                                                                                                                                                        |
| Repository Link             | <a href="https://github.com/Yadlapalli-Sravva/Emotion-Detection-and-Learning-Support-Engine">https://github.com/Yadlapalli-Sravva/Emotion-Detection-and-Learning-Support-Engine</a> |
| Demo Video Link             | <a href="https://drive.google.com/drive/u/0/folders/1k8ZY6XjBbWOTUdpeibzyhHr8PyCD2BVZ">https://drive.google.com/drive/u/0/folders/1k8ZY6XjBbWOTUdpeibzyhHr8PyCD2BVZ</a>             |

## Step 4: Run Instructions

### Pre-requisites

- Python 3.11 or later
- Git
- Streamlit
- Internet connection (for Gemini API)
- Google Gemini API Key

### Steps to Run the Project

**Step 1:** Clone the repository.

```
git clone <repository_link>
```

**Step 2:** Navigate to the project folder.

```
cd Emotion-Detection-Learning-Support-Engine
```

**Step 3:** Create and activate a virtual environment.

```
python -m venv .venv
```

Windows:

```
.venv\Scripts\activate
```

**Step 4:** Install project dependencies.

```
pip install -r requirements.txt
```

**Step 5:** Configure the Gemini API key.

Create a .env file and add:

```
GOOGLE_API_KEY=YOUR_API_KEY
```

**Step 6:** Run the Streamlit application.

```
streamlit run app.py
```

**Step 7:** Open the browser.

```
http://localhost:8501
```

## Step 5: Known Issues / Limitations

| S.No | Known Issue / Limitation                                 | Workaround / Status                                                                 |
|------|----------------------------------------------------------|-------------------------------------------------------------------------------------|
| 1    | Internet connection is required for Gemini AI responses. | Ensure a stable internet connection before running the application.                 |
| 2    | Emotion prediction quality depends on user input text.   | Provide clear and meaningful text for better prediction accuracy.                   |
| 3    | Gemini API key is mandatory.                             | Configure the GOOGLE_API_KEY correctly in the .env file before running the project. |
