Problem Statement

A well-defined problem statement helps identify the challenges faced by learners and educators while providing personalized academic support. The AI Learning Assistant aims to understand students' emotions from their study-related text, enabling timely, empathetic, and personalized guidance. This approach improves learning experiences, reduces frustration, and supports educators in identifying students who need additional assistance.

Problem Statement (PS)	I am	I'm trying to	But	Because	Which makes me feel
PS-1	A student preparing for exams	Understand difficult concepts and solve academic doubts independently	I cannot easily identify why I am struggling or find personalized guidance	Traditional learning resources cannot understand my emotional state or learning difficulty	Confused, Frustrated, and Demotivated
PS-2	An educator or teaching assistant	Quickly identify students who need academic and emotional support	Reading every student message manually takes too much time and emotions are difficult to interpret accurately	There is no automated system that analyses students' emotions and generates personalized responses	Overwhelmed and concerned about student progress
